SSO Annual Report: Water in Basement Narratives	Ohio NPDES Permit No.: 3PD00043*LD				
Enter narrative analysis of WIB patterns by location, frequency and cause. Locations 301 and 302 are the spots that back up during heavy rain. We try to alleviate the system by pumping at MH#5 SS#4 To take the hydraulic load from the plant and prevent the flooding of basements. The Siphon alleviates its self due to the construction of this structure. The Village is in construction of building a 1.2million gallon tank for strom water retention. Hopefully this will alleviate the backups in the syste during heavy rains.
